FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. Agricultural Exports to EC Up Sharply in 1970 (see p. 6). U.S. agricultural exports to the European Community rose substantially to \$1.56 billion in calendar year 1970, reversing a 3-year decline. The 1970 level nearly equaled the 1966 record. Exports of commodities subject to and free of the EC's variable levies increased. U.S. exports of variable-levy commodities to the Community increased to \$454 million, about one-third above the level in 1969, but 29 percent below the 1966 record. An 8-million-ton reduction in EC grain supplies stimulated sharp increases in purchases of U.S. feed grains and wheat.

U.S. exports of commodities not subject to the variable levies increased to an alltime record of \$1.11 billion in 1970, sharply above the \$929 million in 1969 and the previous record in 1967. U.S. shipments of nonvariable-levy products to the Community have increased an average of 6.5 percent a year since 1962. Soybeans and soybean products have accounted for most of this rapid gain. Increases also occurred for fresh fruits, tobacco, nuts, and corn byproducts.

* * * * *

International Price Highlights (see p.16). Feed grain prices, except for Argentine corn, rose during January, while wheat prices were mixed. Cotton and rice prices moved up slightly and the soybean price declined slightly.

* * * * *

World Trade Highlights (see p. 20). Ghana's agricultural imports totaled \$60 million in 1969, up 2 percent from 1968. Except for cereals and cotton, imports of major commodities increased. Imports from the United States, the chief supplier, declined one-fifth. The U.S. share of the market dropped to one-fourth in 1969, from 32 percent in 1968.

Led by an \$18 million gain in meat exports, Ireland's exports of farm products advanced 5 percent in 1969 to \$441 million. Exports to the United States, mainly meats, increased one-fifth to \$45 million, raising the U.S. share of exports to 10.1 percent in 1969, up from 1968's 8.8 percent.

Compared with year-earlier levels, 1969 farm exports of Spain, Greece, and Taiwan were moderately higher. Principal export gains were recorded for Spain's vegetable oils, Greece's fruits and vegetables, and Taiwan's meats, fruits, and vegetables. U.S. takings of Greek exports in 1969 moved up slightly, but the United States took smaller shares of Spain's and Taiwan's farm exports.

* * * * *

U.S. Agricultural Exports, July-January 1970/71 (see p. 42). U.S. agricultural exports in the first 7 months of fiscal year 1971 advanced 18 percent ahead of a year ago, pointing to exports for the full fiscal year totaling \$7.5 billion. This would be 10 percent above the previous record of \$6.8 billion in 1966/67 and well above last year's \$6.6 billion. A 44-percent increase in wheat grain exports and a 32-percent gain in soybeans led the gain in July-January. Other significant advances occurred for soybean oil, tallow, dairy products, feed grains, protein meal, cotton, and live cattle. But tobacco, rice, hides and skins, and flaxseeds were below 1969/70's export levels.

Exports to the European Community, totaling \$1 billion in July-January 1970/71, were nearly one-third above the corresponding months in 1969/70. About one-half of the increase occurred in commodities subject to the variable levies, mainly feed grains. However, wheat exports of \$60 million were about 2½ times larger than a year earlier. Exports of commodities not subject to the variable levies advanced one-fifth, with soybeans and soybean products accounting for 70 percent of the gain. Tallow, variety meats, vegetable oils, tobacco, and cotton also gained. Exports of fruits and vegetables, hides, and flaxseeds were down.

* * * * *

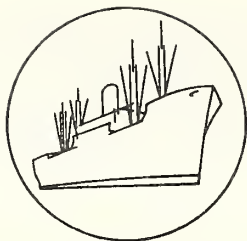

U.S. Agricultural Imports, July-January 1970/71 (see p. 47). The import value of farm products rose to \$3.35 billion in July-January 1970/71 -- 6 percent above the level in the corresponding months a year earlier. The increase was mainly in supplementary (partially competitive) commodities. Larger U.S. purchases of live animals, dairy products, meats, fruits, vegetables, edible nuts, grains, vegetable oil, sugar, and wines pushed imports of these competitive products 8 percent above those in 1969/70. Despite a substantial rise in the value of coffee imports because of higher prices, reduced imports of crude rubber, carpet wool, and tea resulted in little overall change in complementary (noncompetitive) products.

1/ Government-financed programs include exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. 2/ Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and rely primarily upon authority other than P.L. 480; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. 3/ Commodity group totals for feed grains, oilseeds and products, and animals and products include for years noted, in addition to the value reported by the Bureau of the Census, the estimated value of certain commodities donated through voluntary relief agencies, which are included by census in "Other food for relief and charity." 4/ Preliminary data. 5/ Less than \$500,000. 6/ Commodities may not add to total due to rounding.

SPECIAL in this issue

U.S. AGRICULTURAL EXPORTS TO EC UP SHARPLY IN 1970

After declining for 3 consecutive years, U.S. agricultural exports to the European Community rose sharply to \$1.56 billion in calendar year 1970, from \$1.27 billion in 1969. The 1970 level nearly equaled the previous record in 1966. Exports of both commodities subject to the EC's variable levies and those not subject to the variable levies increased.

Variable-levy items accounted for nearly two-fifths of the increase in U.S. agricultural exports to the EC in 1970. U.S. exports of variable-levy items increased to \$454 million, about one-third above 1969, but below the record \$642 million established in 1966. A \$100 million export increase in feed grains accounted for nearly all of the gain. Feed grain shipments totaled \$324 million, sharply above the \$225 million in 1969 but substantially below the \$476 million peak in 1966. Exports of wheat also increased to \$77 million in 1970, from \$56 million in 1969. Other variable-levy commodities showed relatively little value change.

Two main factors caused the sharp rise in U.S. agricultural exports in 1970. The first was a short-term development: Sharp reduction of EC grain production and stocks. Total grain supply in the Community was down approximately 8 million tons in 1970. In addition exports -- especially grains -- were unusually small in 1969 because of the detrimental effects of the longshoremen's strike during January and February at Gulf and Atlantic ports. The second was a continuing development: Livestock industry growth amounting to about 3 percent annually since 1961. This growth continued into 1970 at about this rate of gain. Poultry meat production increased to 19 billion pounds in 1970 from 17.6 billion in 1969. Pork production was about 5.5 percent above a year earlier. With increased livestock production, the EC has boosted considerably imports of protein concentrates and other feedstuffs.

Economic growth continued in 1970. Overall industrial production in the Community increased about 6 percent, down from the 9-percent gain of 1969. Per capita gross national product rose by over 5 percent from \$2,186 (1968 prices) in 1969. France and Germany have the highest per capita incomes in the Community. Italy's per capita GNP increase of 5.8 percent in 1970 was one of the largest last year.

While the EC members did not change the parity of their currencies in 1970, changes in 1969 in West Germany and France affected the 1970 trade pattern. France continued an export tax and an import subsidy to offset the effect of 1969 devaluation on agricultural trade and farm income. Although border adjustments to compensate for the 1969 devaluation were phased out on January 1, 1970, West Germany continued to compensate its farmers by direct payments from the German Treasury and by manipulations of the value added tax; moreover German agriculture received direct payments from the FEOGA.

U.S. AGRICULTURAL EXPORTS TO EC BY VARIABLE-LEVY AND NONVARIABLE-LEVY COMMODITIES

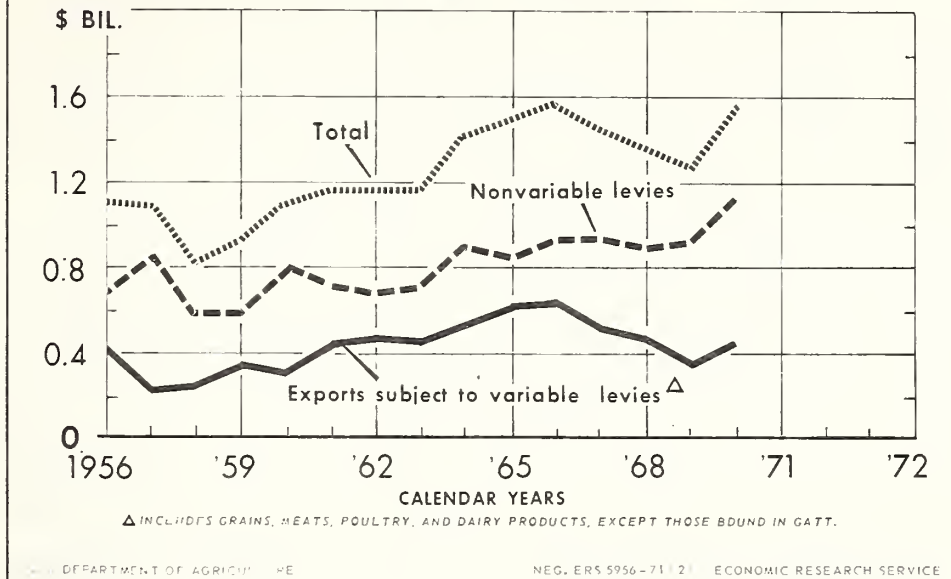

Figure 1

After transshipments adjustment, West Germany was the largest European market for U.S. agricultural exports in 1970. Shipments from the United States totaled an estimated \$600 million. Netherlands, the next best market for U.S. farm products, took about \$475 million worth. An estimated \$150 million worth of farm commodities were transshipped through the Netherlands to other countries in 1970.

Italy, the third largest market, took an estimated \$215 million of U.S. farm products in 1970, a considerable drop from previous years. Italy took less feed grains and hides and skins.

U.S. exports of farm products to France totaled over \$200 million in 1970. Substantial advances in U.S. soybean and soybean product exports to France in recent years have more than offset a sharp reduction in cotton exports. Belgium-Luxembourg, the smallest and perhaps the stablest EC market for U.S. agricultural products, took around \$130 million worth in 1970. An estimated \$50 million worth of agricultural shipments were transshipped from Belgium. Tables 2 and 3 show U.S. agricultural exports not adjusted for transshipments as reported by the U.S. Bureau of the Census.

Variable-Levy Commodities

U.S. exports subject to variable levies accounted for 29 percent of total agricultural shipments to the EC in 1970, up from 27 percent in 1969 but below the 41-percent level in 1966. Since the 1967 unification of EC grain prices, the trend of U.S. variable-levy exports has been down. An increase in 1970 to \$454 million, from \$340 million in 1969, still left these exports significantly below the \$642 million of 1966. Unusually low exports in 1969 were due in **part** to effects of the U.S. longshoremen's strike at Gulf and Atlantic ports.

U.S. AGRICULTURAL EXPORTS TO THE EC, BY PRINCIPAL COMMODITIES

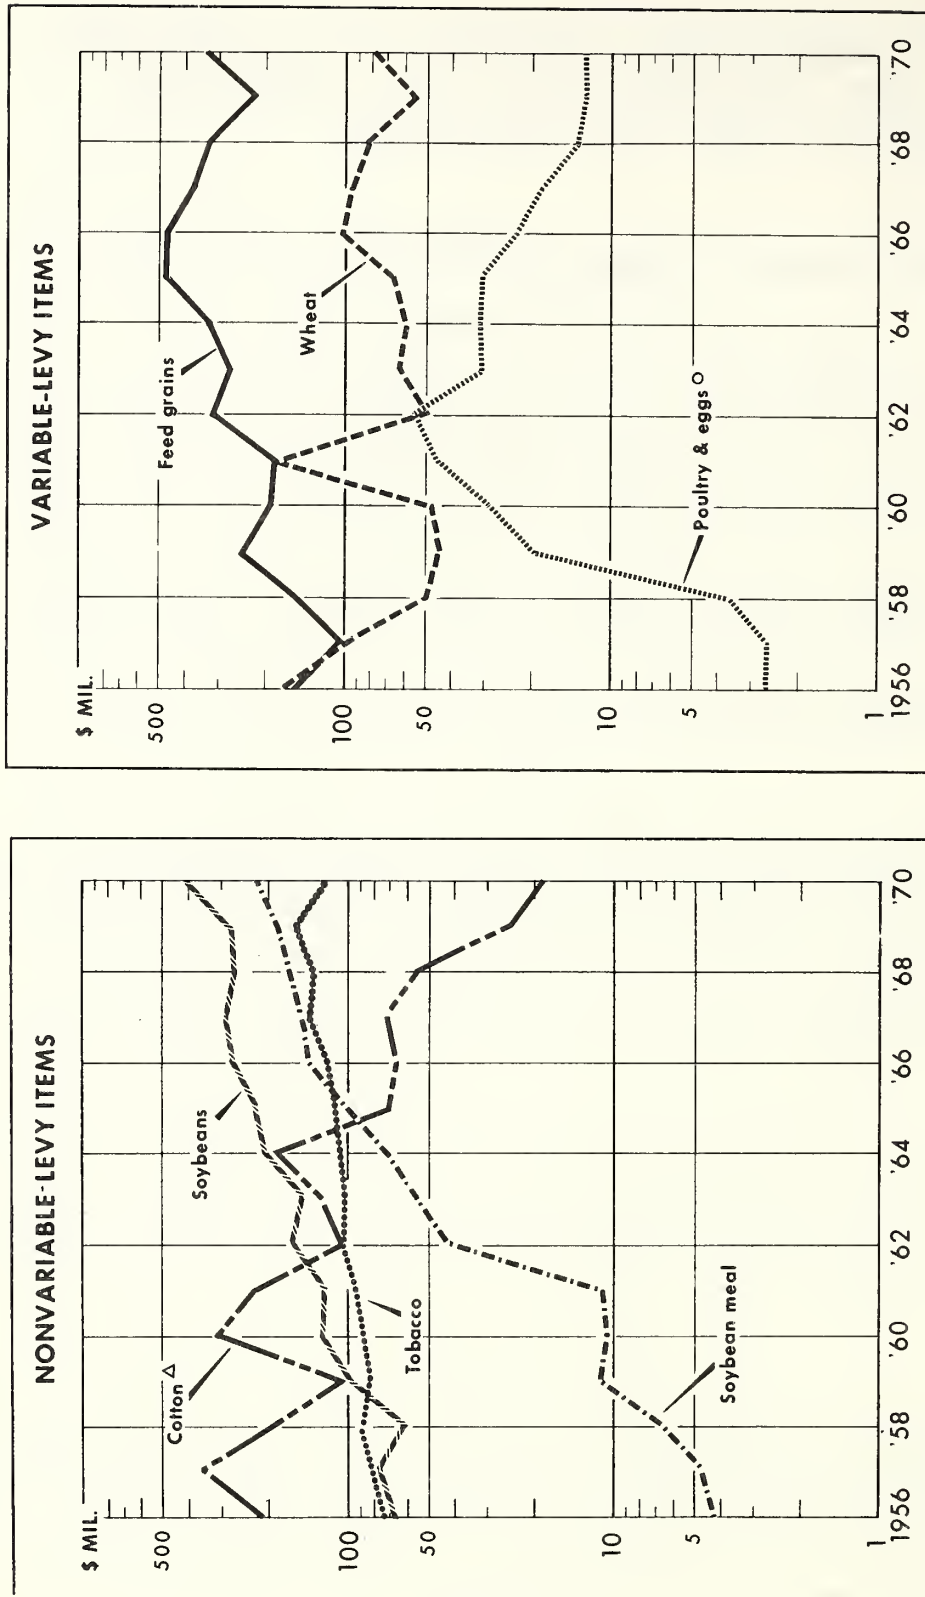

Figure 2

Δ EXCLUDES LINTERS. ○ EXCLUDES CANNED POULTRY.
COMMODITIES SHOWN MADE UP ABOUT 3/4 OF TOTAL RECENTLY. VERTICAL SCALE IS LOGARITHMIC.

Feed grains.--The gain in exports in 1970 reflected to a considerable degree the reduced grain and forage crop in the Community. Wheat production was down while feed grain production showed little change. However, reduced forage production made larger feed imports necessary.

Livestock production in the EC increased 3 percent. But feed grain production changed little, lower quantities of wheat were available for feeding, and grain stocks shrank, stimulating U.S. feed grain exports. Feed grain shipments to the EC in 1970 increased to \$324 million in 1970 from \$225 million in 1969. West Germany and the Netherlands accounted for most of this gain. Shipments to Italy were about the same as a year earlier.

At present, the Community is about two-thirds self-sufficient in grain production, up from around one-half in the early 1960's. Intra-Community grain trade has expanded sharply since 1962, totaling around 3.8 million tons in 1969/70. Because of the high cost of grains in the EC, feed manufacturers have turned to alternate feed materials. They feed soybean meal liberally because it is economically priced. In addition, they substitute cheaper products not subject to the variable levies for high-priced grains. Other items substituted for grain include beet pulp, manioc, gluten feed, and corn byproducts. U.S. exports of corn byproducts totaled \$34 million in 1970, down from \$37 million in 1969, but in contrast to less than \$1 million in 1960. Most U.S. exports of corn byproducts are starch manufacturing industry residues, mainly gluten feed, exempt from EC variable levies.

Wheat.--U.S. exports of wheat to the EC in 1970 rose \$21 million to \$77 million. The gains were focused in West Germany and the Netherlands.

U.S. exports of wheat to the Community have shown a fairly steady decline since unification of EC prices in 1967. U.S. exports then were \$106 million. Exports of wheat to the EC have varied sharply from year to year, ranging between a 1956 high of \$177 million and a low \$45 million in 1959. With high wheat price support incentives, the EC has become nearly self-sufficient except in years of poor crops. However, the EC has been a rather sizable market for high-protein wheat used for blending with indigenous wheat to obtain desired baking qualities. Moreover, France and Italy have purchased considerable quantities of durum wheat for use in pasta products. The European Community has increased its production of high-protein wheat through the development of better seeds and improved production practices. But the competition in this market has been very intense with more wheat coming from Canada and Australia.

Rice.--U.S. exports of rice fell to \$21 million in 1970 from the high of \$31 million in 1969, as Latin American producers greatly increased shipments to the EC of highly subsidized rice. Shipments from Latin America rose sharply in 1970 from 35,000 tons in 1969. The Community produces about a million tons of short-grain rice annually in Italy and France. The increased demand in the Community has been for long-grain rice, mainly supplied by the United States in recent years. France and Italy have developed a long-grain rice, but it is still insignificant in total EC consumption.

Poultry.--U.S. exports of poultry and poultry products totaled \$13 million in 1970, about the same as a year earlier. The increase in eggs and live poultry, mainly baby chicks, about offset declines for broilers and fryers and other fresh poultry. Turkey exports of \$8.9 million were nearly the same as in 1969, but below the \$17.5 million in 1965. Overall, U.S. exports of poultry products to the EC are down sharply from the \$53 million peak in 1962.

Other commodities.--"Other" variable-levy exports showed little net change from the relatively low level a year earlier. Shipments of beef, lard, and dairy products increased slightly, while pork exports were off sharply. There were no rye grain exports in 1970, in contrast to \$408,000 for 1969.

Nonvariable-Levy Commodities

U.S. exports of commodities not subject to variable levies increased to an alltime record of \$1.11 billion in 1970, above the \$929 million in 1969 and the previous record \$931 million in 1967. Since the creation of the Common Agricultural Policy in 1962, U.S. exports of nonvariable-levy products to the European Community have increased an average of 6.5 percent a year. Soybeans and soybean products accounted for most of this rapid increase. Additional increases came from fresh fruits, tobacco, nuts and preparations, and corn byproducts.

Exports of oilseeds and products rose to a record \$665 million in 1970, from \$500 million in 1969. Soybean exports, rising to a record \$409 million, accounted for about three-fourths of this increase. Soybean meal gained sharply to \$220 million in 1970 from \$183 million in 1969.

Substantial growth in the livestock industry in Western Europe, plus adoption of specialized livestock production, and high grain prices in the Community all have stimulated U.S. exports of soybeans and soybean meal in recent years. At the same time, alternate sources of protein have remained relatively tight. Peanut meal from Africa has been very scarce, with production down in Nigeria, Senegal, and Niger. Although fishmeal production in Peru increased sharply in 1970, exports from Peru have gained relatively little. About half of the protein import requirement of the EC is now supplied by the United States in the form of soybeans or soybean meal.

U.S. exports of vegetable oils rose to \$20 million in 1970 from \$14 million in 1969, reflecting tight world supplies of fats and oils. Tallow shipments more than doubled to \$33 million in 1970. Most U.S. tallow exported to the EC is utilized in the mixed feed industry.

U.S. exports of tobacco declined to \$124 million in 1970 from \$149 million in 1969. In 1970, the European Community purchased large quantities of tobacco from nontraditional suppliers such as Mainland China, Korea, and India. Europeans prefer U.S. tobacco because of its distinct aroma and taste, but reacted to high U.S. tobacco prices, which averaged about \$1 a pound in 1970.

The Community produces only about one-third of the tobacco it uses. The United States gained a larger share of the EC market in 1967 when U.N. trade sanctions were imposed against Rhodesia. Before the sanctions, Rhodesia was a major U.S. competitor, exporting 43 million pounds to the EC in 1965.

Cotton.--U.S. exports of cotton declined for the third consecutive year. Exports of cotton to the EC dropped to \$19 million from \$24 million in 1969 and \$313 million in 1960. The United States has suffered because of increased competition from the foreign free world and a substantial rise in the production of man-made fibers within the Community.

Fruits.--U.S. exports of fruits totaled \$67 million in 1970, little changed from the previous year. Gains in dried fruits, canned peaches, and pineapples were about offset by declines in fresh oranges and apples, fruit cocktail, and other canned fruits. Fruit juices rose \$3 million to \$11 million. Stagnation in U.S. exports of fruits and preparations reflects (1) increased imports of fruits from preferential Mediterranean countries, (2) increased EC production of many deciduous fruits, and (3) increased competition from other major producers of canned fruits, especially Australia and South Africa.

Vegetables.--U.S. exports of vegetables and preparations rose to \$22 million in 1970 from \$17 million in 1969. Dried bean exports increased to \$8 million from \$5.7 million, while dried peas were up to \$5.4 million in 1970, compared with \$4.6 million in 1969. Canned asparagus exports fell to \$431,000 from \$692,000. In 1963, EC purchased nearly \$10 million worth of asparagus from the United States. However, increased competition, especially from Taiwan, sharply reduced U.S. shipments.

Hides and skins.--U.S. exports of hides and skins declined one-fourth from the \$24 million of 1969. Uncertainty concerning prospects of the U.S. market for Italian shoes may have played a part. However, the United States supplies less than 10 percent of the hides used in leather manufacture in the Community.

Other commodities.--U.S. exports of nuts and preparations rose to \$22 million, mainly because of increased exports of almonds. U.S. almond production increased sharply with increased mechanical harvesting. U.S. exports of variety meats, not a variable-levy item, rose to a record \$42 million in 1970 from \$37 million in 1969. Demand for specialty meats is very strong in the Community to supplement domestic production. U.S. exports of canned poultry fell to \$47,000 in 1970 compared to \$172,000 in 1969, and the high of \$3.9 million in 1964. This product is now supplied from the substantially expanded European Community poultry industry. Canned poultry is bound in GATT and is not subject to the EC's system of variable levies.

Table 2.---U.S. agricultural exports to the EC: Value by commodity and country, calendar years 1969 and 1970

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.

2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

4/ Variable levy on sugar-added content.

5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export highlights, March 1970").

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.

2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

4/ Variable levy on sugar-added content only.

5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export highlights, March 1970").

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

The most significant price movements during January were increases in the c.i.f. U.K. prices of U.S. corn and of sorghum grain.

U.S. No. 3 yellow corn, c.i.f. U.K., was selling at \$76.35 per metric ton and at that level was 1 percent above a month earlier and 21 percent above January 1970. Sorghum grain, c.i.f. U.K., was quoted at \$69.47 a metric ton, a 4-percent increase over December and a 10-percent increase over January 1970. On the other hand, Argentine corn, c.i.f. U.K., was selling at \$77.24, 1 percent below December. Thus, the premium at which Argentine corn sold over U.S. corn, c.i.f. U.K., was reduced to 89 cents a metric ton. This price alignment was somewhat similar to that prevailing during the winter of 1970, but differed from the normal larger premium of Argentine over U.S. corn. For the first time in many years, the supplies of coarse grains are expected to be close to requirements. Despite a planted corn area in Argentina 7 percent above last year's, the crop now approaching harvest may amount to less than the 9.4 million tons produced last year. The market, however, seemed to anticipate a comfortable Argentine crop with the Argentine corn price, c.i.f. U.K., continuing the slide that started at planting time, even though the price level remained 23 percent above a year ago. According to the January survey of farmers' intentions to plant, U.S. corn acreage will be 6 percent above last year's. Nevertheless with uncertainty over the severity of leaf blight damage, the size of the 1971 U.S. corn crop is in doubt.

Prices for Canadian wheat were virtually unchanged. Canadian No. 1 Northern wheat, in store Fort William-Port Authur, was selling at \$65.98 a metric ton, a slight increase over December but 7 percent above a year earlier. Northern Manitoba No. 2 wheat, c.i.f. U.K., however, decreased slightly to \$83.85 a ton, a level 13 percent above a year earlier.

Buyer's and seller's prices of U.S. No. 1 Hard Winter wheat, ordinary protein, f.o.b. Gulf ports, became identical as the export payment was reduced to zero. The price was \$63.57 a metric ton, only fractionally different from the higher seller's and the lower buyer's prices in December. The buyer's price showed a 22-percent increase over a year earlier, while the seller's price showed an 8-percent increase.

U.S. No. 2 Hard Winter wheat, c.i.f. U.K., was quoted at \$78.08 a metric ton, 2 percent below a month earlier and 12 percent above a year earlier.

Australian wheat, c.i.f. U.K., quoted at \$72.63 a ton, was 1 percent over a month earlier and 14 percent over a year earlier. Recent estimates put the 1970/71 Australian wheat crop at 8.2 million metric tons, 25 percent below 1969/70 production. Argentine wheat, c.i.f. U.K., was unquoted for the fifth consecutive month. High wheat prices relative to last year continue. Poor weather conditions and voluntary crop reductions have curtailed production.

Total world trade in wheat will rise, according to estimates, by 5 million tons in 1970/71, bringing the total to 55 million tons. This increase reflects both a normal rise in demand and the growing substitution of wheat for coarse grains in feed mixtures.

The export price of Thai rice was quoted at \$139.20 a metric ton, a 1-percent increase over the previous month but 10 percent less than the previous year.

U.S. No. 2 soybeans, c.i.f. U.K., were quoted at \$128.01, a slight decrease from December but still 18 percent above a year earlier.

The price of cotton, Memphis Territory, strict middling 1-1/16 inches, c.i.f. Liverpool, increased 1 percent to 31.0 cents a pound, its highest level since October 1968.

1/ Buyer's price equals seller's price plus cost of export certificate or minus export payment, except for rounding errors.

2/ U.S./ Argentine sorghums transshipped from Continental European ports.

3/ Restricted availability of prices, due to a mail strike in the United Kingdom, has caused a methodological deviation. All U.K. prices above for the month of January, except cotton, are based upon two Wednesday and three Saturday quotations through the middle of January, which were available to date. The table will be revised as soon as the remainder of the figures become available.

World Trade Highlights

AGRICULTURAL IMPORTS OF GHANA

In 1969, the agricultural imports of Ghana totaled \$60.4 million, 2 percent above the year-earlier level, and 9 percent above the 1962-65 average (tables 5 and 6). The United States is the largest source of Ghana's agricultural imports, supplying from 15 percent to 32 percent in recent years. Live animals, sugar, and dairy products each accounted for 14 percent of Ghana's total agricultural imports in 1969. Imports of wheat, Ghana's top-ranking farm import in 1967 and 1968, declined 12 percent in 1969 to end up in fourth place. Rice imports led Ghana's farm product purchases in 1962; since then they have exceeded wheat and flour imports in only one year -- 1965. Ghana's imports of animal and vegetable fats and oils increased to \$6.8 million in 1969 from less than \$2 million in 1962. Meanwhile, imports of vegetables and preparations declined steadily to less than \$1 million from nearly \$5 million.

The United States, the principal source of agricultural commodities for Ghana, supplied \$15 million worth or one-fourth of Ghana's farm imports in 1969. This was 21 percent less than in 1968, when the U.S. share accounted for 32 percent of Ghana's total farm imports. Based on U.S. export statistics, Ghana purchased \$11.3 million worth of U.S. agricultural products in 1970, compared with \$12.6 million in 1969. Although the total value of Ghana's 1969 imports of U.S. farm products advanced only 13 percent from 1962, the commodity mix differed substantially. In 1962, rice, wheat and flour, and tobacco accounted for 75 percent, 12 percent, and 8 percent, respectively, of Ghana's agricultural imports from the United States; and Ghana was not in the market for U.S. cotton or fats and oils. Of Ghana's 1969 U.S. farm product imports, all of which were under Government programs, rice accounted for 36 percent, fats and oils 28 percent, wheat and flour 14 percent, cotton 12 percent, and tobacco 1 percent.

In 1969, the United States supplied these shares of Ghana's major agricultural imports: Cotton, 100 percent; rice, 90 percent; tobacco, 65 percent; fats and oils, 62 percent; wheat and flour, 29 percent; and dairy products and eggs, 6 percent.

AGRICULTURAL EXPORTS OF IRELAND, SPAIN, GREECE, AND TAIWAN

Ireland.--Agricultural exports from Ireland were valued at \$441 million in 1969, up 40 percent from 1962 but slightly below the record \$449 million in 1967 (tables 8 and 12). Meats, dairy products, and live animals accounted for more than three-fourths of Ireland's farm commodity exports in 1969. Compared with 1962 export levels, 1969 dairy product exports more than doubled, meat exports advanced 78 percent, and exports of live animals were approximately the same.

Since 1962, the U.S. share of Ireland's agricultural exports has ranged from 2.5 percent to 10.1 percent (table 7). U.S. import statistics show that Ireland exported \$51.2 million worth of farm products to the United States in 1970, compared with \$39.8 million in 1969. Year-to-year fluctuations mainly reflected changes in the value of meat exports. Meats and preparations represented 77 percent of Ireland's farm product exports

Compiled from United Nations data.

to the United States in 1969 in contrast to 44 percent in 1965. Although meat exports accounted for three-fifths of the value gain in Ireland's shipments to the United States since 1962, exports of sugar, cocoa, dairy products, wool, and animal feeds also have advanced substantially.

In 1969, the United States purchased these shares of Ireland's major farm product exports: Meats, 22 percent; sugar, 34 percent; wool, 24 percent; and animal feeds and coffee-tea-cocoa-spices, 11 percent each.

The United Kingdom was Ireland's leading farm product customer in 1969, taking \$344 million worth or 78 percent of the total. The United Kingdom was the leading market for Ireland's meats, live animals, dairy products, beverages, vegetables, animal feeds, hides, wool, sugar, fruits, and fats and oils.

Spain.--Agricultural exports from Spain in 1969 amounted to \$583 million. This was 45 percent above the 1962 figure and only slightly below the 1967 peak (tables and). Compared with year-earlier levels, substantial advances in Spanish vegetable oil and feed grain shipments more than offset export declines for fruits and vegetables, rice, sugar, meats, and wool. Nearly half of Spain's farm commodity exports in 1969 went to the three leading country markets -- United Kingdom, West Germany, and France.

In 1969, Spain's exports of farm products to the United States, valued at \$65 million, were 10 percent below 1968's record. Vegetables (\$41 million), vegetable oils (\$10 million), and beverages (\$4½ million) accounted for 63 percent, 15 percent, and 7 percent, respectively. Vegetable and beverage exports to the United States have more than doubled in value since 1962. Based on U.S. import statistics, Spain exported \$82.7 million worth of farm commodities to the United States in 1970, compared with \$72.2 million in 1969. In 1969, the U.S. shares of Spain's major farm exports were: Vegetables and preparations, 34 percent; sugar, 39 percent; coffee, tea, cocoa, and spices, 24 percent; vegetable oils, 14 percent; and beverages, 8 percent. For all farm commodity exports, the U.S. share was 11 percent in 1969, compared with 13 percent in 1968 and 9 percent for 1962-67.

Spain's agricultural exports to the European Community and the United Kingdom increased substantially in 1969. The EC has granted a number of preferences to such Spanish agricultural products as citrus fruits and vegetables.

Compiled from United Nations data.

Greece.--Shipments of farm products from Greece in 1969 topped \$300 million for the third consecutive year (tables 10 and 14). Valued at \$302 million in 1969, Greece's farm exports were little changed from a year earlier but 50 percent above the 1962 rate. Foreign sales of tobacco, the principal export commodity, have fluctuated between \$71 million in 1962 and \$137 million in 1967 with no clearly definable trend. Since 1962, exports of fruits, vegetables, beverages, vegetable oils, sugar, and dairy products have trended upward. Tobacco and fruits account for approximately two-thirds of Greece's agricultural exports.

Tobacco shipments generally represent about four-fifths of Greek agricultural exports to the United States. Greek tobacco is of the oriental type used for blending with U.S. tobaccos. It competes with Turkish tobacco for the U.S. oriental leaf market. Since 1962, tobacco sales to the United States ranged from 1962's \$9 million to nearly \$46 million in 1963. Vegetable shipments to the United States have increased steadily, reaching a value of nearly \$4 million in 1969, up from \$1½ million in 1962. The United States received 10.4 percent of Greek farm commodity exports in 1969, compared with 9.6 percent a year earlier and 7 percent in 1962. U.S. import statistics indicate that Greek farm exports to the United States totaled \$36.2 million in 1970, compared with \$33 million in 1969.

Although Greece is an associate member of the European Community, sharply smaller farm exports to Italy in 1969 more than offset moderate increases in agricultural exports to the other EC countries.

Taiwan.--Substantial gains in shipments of meats, fruits, and vegetables boosted Taiwan's 1969 farm commodity exports to \$259 million, up 7 percent from the previous year and more than double the 1962 level (tables 17 and 15). The commodity mix of Taiwan's agricultural exports has changed substantially from year to year. Sugar exports increased from \$46 million (41 percent of the total) in 1962 to \$129 million (53 percent of the total) in 1964, and declined to \$48 million (18 percent of the total) in 1969. Similarly, rice shipments advanced from \$6 million in 1962 to \$41 million in 1965, and plunged to \$5 million in 1969. On the other hand, vegetable exports (\$82 million) in 1969 were six times the 1962 level. Fruit exports quadrupled during the same period. Taiwan's meat exports, beginning with \$22,000 worth in 1965, advanced sharply to more than \$8 million in 1969.

Taiwan's agricultural exports to the United States have advanced steadily, reaching a record \$43 million in 1969, more than double the 1962 pace. Vegetables, fruits, and sugar accounted for 86 percent of Taiwan's 1969 farm product shipments to the United States. Based on U.S. import statistics, Taiwan's farm exports to the United States reached \$50.5 million in 1970, compared with \$42.3 million in 1969.

The U.S. share of Taiwan's agricultural exports, after dropping from 19 percent in 1962 to 12 percent in 1964, advanced to 17 percent in 1969.

Japan is Taiwan's best agricultural market, purchasing \$95 million worth in 1969. These shipments -- mainly fruits, vegetables, and meats -- represented 37 percent of Taiwan's total farm exports.

Taiwan's vegetables and fruits compete vigorously with U.S. products in many foreign markets, particularly asparagus in West Germany and pineapples in Japan.

AGRICULTURAL EXPORTS OF YUGOSLAVIA, PORTUGAL, SINGAPORE, AND SWITZERLAND

Total agricultural exports and exports to the United States from Yugoslavia, Portugal, Singapore, and Switzerland by commodities for calendar years 1962-69 are shown in tables 16 through 19.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-JANUARY 1970/71

U.S. agricultural exports in July-January 1970/71 rose 18 percent to \$4.54 billion. Exports totaled \$3.86 billion a year earlier. Wheat grain exports gained 44 percent and soybeans gained 32 percent. Other significant advances occurred for soybean oil, tallow, dairy products (under Government-financed programs), feed grains, protein meal, cotton, and live cattle. Tobacco, rice, hides and skins, and flaxseed showed declines.

Prospects for U.S. agricultural exports in the current fiscal year continue very bright. With the 18-percent increase in the first 7 months, U.S. exports of farm products for all of fiscal year 1971 may total around \$7-1/2 billion. This would be a tenth above the previous record of \$6.8 billion in 1966/67 and well above last year's \$6.6 billion. Volume, likely to rise around 6 percent from the 1966/67 record, will account for approximately two-thirds of the overall increase. Higher prices for feed grains, wheat, cotton, soybeans, soybean oil, and protein meal will account for the rest of the value gain. Wheat exports during the current fiscal year are forecast at 725 to 750 million bushels, up from the 606 million in 1970. Soybean exports, seen at 460 million bushels, would total above the 405 million bushels in 1969/70. Feed grain exports may be about the same as the 19.5 million metric tons exported in 1969/70, on a fiscal year basis, although perhaps down a little for the domestic marketing year ending next fall. Corn prices are averaging 12 percent above a year earlier. Increased world production and export competition in principal dollar markets will hold rice exports below the 40 million bags exported in 1969/70. Cotton exports may total 3.5 million running bales in 1970/71, compared with 2.9 million in the previous year. Other significant increases are expected for animal fats and oils, vegetable oils, protein meal, and dairy products. Exports of tobacco, meat, and hides and skins may drop from relatively high 1969/70 levels.

U.S. exports of oilseeds and products were up one-third in July-January 1970/71 over the like period a year earlier. Sharply larger soybean exports accounted for about two-thirds of the increase. The gain in soybeans was concentrated in Western Europe and Japan. Japan upped its purchases nearly 15 million bushels, while the European Community took an added 10 million bushels. Shipments to Israel, Spain, Taiwan, United Kingdom, and Korea also were up.

Protein meal exports rose to 2.6 million tons in July-January 1970/71, from 2.2 million for the same months in 1969/70. Approximately 70 percent of U.S. protein meal exports went to the European Community. Smaller grain production and stocks and increased livestock production in the EC substantially increased the demand for protein supplements.

Exports of cottonseed and soybean oils rose to 1.1 billion pounds in July-January, up from 795 million pounds in the same 1969/70 period. Aided by rising prices, the overall value increased 70 percent to \$154 million. Developing countries took most of the increase, but many developed countries purchased more U.S. vegetable oils because of tight world supplies of competing oils.

Other	148	153	+3
Total exports	3,860	4,536	+18

1/ Preliminary. 2/ Includes fur skins. 3/ Includes bulk smoking tobacco.

Exports of grains and preparations were up about one-fifth in July-January 1970/71 from the same period a year earlier. The value of wheat exports rose two-fifths and feed grains gained 15 percent. Rice, however, was down 7 percent because of reduced exports to developed countries. Significantly greater wheat shipments went to Europe because of reduced production and stocks. In addition, Japan purchased 67 million bushels, up from 51 million in 1969/70. Other gains occurred for Pakistan, Korea, Morocco, and Taiwan.

Feed grain exports of 12.8 million metric tons were up from 12.2 million in July-January a year earlier. Larger exports of barley, grain sorghums, and oats more than offset the 51-million-bushel decline in corn sales. Gains were concentrated in the EC with a 53-percent increase to 4.2 million tons. Japan's purchase of 4.1 million tons was about the same as in 1969/70.

Cotton exports of over 800,000 bales in December and January brought the July-January value total to over one-fifth above a year earlier. Asia, the best market area for U.S. cotton, took approximately three-fourths of U.S. cotton in July-January 1970/71. The pickup in cotton exports stemmed from smaller free world production and some gain in mill consumption. The tight U.S. supply of cotton, especially short-staple cotton demanded by foreign markets, will limit the growth in U.S. cotton exports in 1970/71.

Exports of animals and animal products in July-January 1970/71 rose 13 percent. Lard, inedible tallow, dairy product, and live cattle shipments gained. Higher prices for animal fats contributed significantly to the 41-percent value rise for this group in July-January. Hide and skin and meat exports were below the level of a year earlier.

Exports of fruits and preparations were down slightly because of lower shipments of canned and fresh fruits. Fruit juices and dried fruits were up slightly. Vegetable exports gained slightly because of larger shipments of dried beans, lentils, and dehydrated soups and vegetables. But exports of canned and fresh vegetables and dried peas were down.

Reduced tobacco shipments to the leading markets, United Kingdom and Japan, pushed total tobacco exports down 6 percent to \$357 million in July-January 1970/71.

U.S. Agricultural Exports to the EC, July-January 1970/71

U.S. exports to the European Community totaled \$1.06 billion in July-January 1970/71, up nearly one-third from the corresponding months in 1969/70. About one-half of the increase occurred in commodities subject to the EC variable import levies. Feed grain exports accounted for most of this increase. Feed grain exports were unusually heavy to the EC because of reduced grain and forage production and lower grain stocks in the Community. In the previous year, the EC exported large quantities of grains by heavy subsidization. Wheat exports of nearly \$60 million were in contrast to only \$25 million exported in July-January 1969/70. On the other hand, rice exports of \$12 million were below the \$23 million a year earlier. Competition was very strong from Latin America, which heavily subsidized the export of surplus rice to the EC this year. Turkey exports also were down slightly. Other variable-levy items showed little change.

U.S. exports of commodities not subject to variable levies advanced 21 percent to \$724 million. Soybeans and soybean products accounted for 70 percent of this increase. Exports of soybeans and soybean meal were up over one-fourth. Tallow, variety meats, vegetable oil, tobacco, and cotton also gained. Fruits and vegetables, hides, and flaxseed were all below the levels of a year earlier. Sharply increased shipments to West Germany in January accounted for the gain in tobacco.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

Import Highlights

U.S. AGRICULTURAL IMPORTS, JULY-JANUARY 1970/71

U.S. purchases of foreign farm products in July-January gained 6 percent over corresponding months a year earlier. Value rose to \$3.35 billion from \$3.15 billion last year. The import gain was concentrated in supplementary (competitive) commodities, which expanded 8 percent to \$2.1 billion (table 22). Larger inflows were evident for live animals, dairy products, meat, fruits and vegetables, edible nuts, grains, vegetable oil, sugar, and wines.

Vegetable imports accelerated 10 percent. Entries of fresh tomatoes totaled 107 million pounds (\$15 million) against 110 million pounds (\$16 million) during the same period in 1969/70 (table 23). Cucumber entries amounted to 64 million pounds (\$5.8 million), compared with 45 million pounds (\$4.0 million) last season. Fresh peppers rose to 22 million pounds (\$3.9 million) from 13 million pounds (\$2.3 million). The bulk of fresh vegetables entered from Mexico.

Coconut oil imports showed substantial growth. Increased output in the Philippines following hurricane damage, higher prices, and strong demand in the United States contributed to this surge. The July-January volume of U.S. coconut oil imports was 341 million pounds, up 19 percent; value rose 29 percent to \$44 million. Prices averaged 12.9 cents per pound against 11.6 cents during similar months of 1969/70.

Reduced U.S. imports of crude rubber, carpet wool, and tea, combined with lower cocoa prices, nearly offset gains by other complementary (largely noncompetitive) products. Sharply higher coffee prices contributed most to the value rise in complementary imports; green coffee volume dropped 13 percent to 1.48 billion pounds while value increased 16 percent to \$685 million. The volume of banana entries gained nearly 15 percent to 2.37 billion pounds.

Table 24 shows U.S. agricultural imports from 26 leading suppliers for the last 3 years. Imports by commodity group were published in the February issue of Foreign Agricultural Trade of the United States. For more detailed commodity information, see table 25 in this issue.

1/ Based on 359 classifications in 1970. 2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
